Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

0uter membrane protein B precursor (168 KDa surface-layer protein)
(Surface protein antigen) (Cell surface antigen 5) (Sca5) (TompB)
(Tomp B) [Contains: 120 KDa surface-exposed protein (Surface protein antigen) antigen) (120 KDa outer membrane protein ompB); 32 KDa beta peptidel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Cloning, expression and sequence analysis of the gene encoding the "Cloning, expression and sequence analysis of the gene encoding the 120 kD sufface-exposed protein of Rickettsia rickettsii."; Mol. Microbiol. 3:1579-1586(1989).

-i- FUNCTION: THE 120 kDa SURRACE-EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.

-i- SUBCELLUIAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A LAYER WITH HEXAGONAL SYMMETRY.

-i- SIMILARITY: BELONGS TO THE RICKETTSIAE OMPA/OMPB FAMILY.

SUBCELULAR LOCATION IN SUPERCOLED WATER.
SUBCELULAR LOCATION: Outer membrane (By similarity).
DOMAIN: CONTAINS 153 IMPERECT REPEATS OF THE CONSENSUS
CCTAPEPTIDE A-G-Y-G-Y-T-T; FURTHER ON A 16-RESIDUE AND A
REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.
NISCELARBOUS: A STRUCTHAR MODEL IS SUGGESTED IN WHICH THE ICE
NUCLEATION PROTEIN DISPLAYS A SYMMERRY RELATED TO THAT OF ICE.
SIMILARITY: BELONGS TO THE BACTERIAL ICE NUCLEATION PROTEIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hackstadt T. Messer R., Cleavage of the 120-kilodalton outer membrane protein of Tickettsiae: identification of an avirulent mutant deficient in processing."

Infect. Immun. 60:159-165(1992).

-! FUNCTION: THE 120 kDa SURRACE EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETISIAL VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.

-! FUNCTION: THE 32 kDa BETA PEPTIDE NAY SERVE AS A MEMBRANE ANCHOR.

-! FUNCTION: THE 32 kDa BETA PEPTIDE NAY SERVE AS A MEMBRANE ANCHOR.

-! SUNCTION: THE 32 KDA BETA PEPTIDE NAY SERVE AS A MEMBRANE ANCHOR.

-! SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A S-LAXER WITH HEXAGONAL SYMMETRY.

               The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kDa. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans. The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.
                                                                                                                                                                                                                                                                                                                                                        DFVRTYDTVEFLSADTKTTTVNVESKDNGKKTEVKIGAKTSVIKEKDGKLVTGKGKDENG

The present invention relates to the isolation of novel Neisseria meningitidis mutant polypeptides of the surface antigen NhhA chofofi82-AM06186; The modified or mutant NhhA polypeptides are characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylatcic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding wild-type surface antigen. The present sequence representing the wild type surface antigen NhhA (from N. meningitidis strain BZ198 is 1 of 10 NhhA polypeptide sequences (AMU06171-AMU06180) from 10 different N. meningitidis strains given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New NhhA surface antigen polypeptides and polynucleotides from Neisseria meningitidis, useful in producing vaccines for treating or preventing broad spectrum of Neisseria meningitidis -

                                                                   The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kba. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, especially in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Surface antigen NhhA; meningococcal disease; meningitis vaccine.
